

Shelby Energy Cooperative

A Touchstone Energy Cooperative 

ENERGY STAR® Heat Pump and AC Program Guidelines

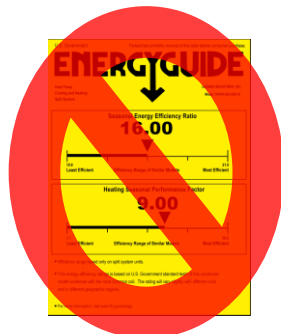

ELIGIBILITY:

Shelby Energy Cooperative is now offering a rebate for new ENERGY STAR certified heat pumps and central air conditioners. Residential members of Shelby Energy Cooperative are now eligible to receive a \$300 incentive for installing an ENERGY STAR level heat pump or air conditioner (**minimum 15.0 SEER; 8.5 HSPF**) up to 3 per year, max 6 per location per lifetime. Members may apply for their rebate on Shelby Energy Cooperative's website or they can obtain a paper application from Shelby Energy Cooperative's local office.

Documentation:

For members to receive their rebate, they will need two documents from their installer:

1. A copy of their **receipt and**
2. A copy of the **AHRI Certificate** that certifies the match of their indoor and outdoor coil.
 - Heat pump and central air conditioner efficiencies will only be accepted based on a certified match, as proven on the AHRI Certificate. Indoor coil and outdoor unit model numbers must match those published on the AHRI Certificate. AHRI Certificates can be found at <https://www.ahridirectory.org/ahridirectory/pages/home.aspx>.
 - **The yellow energy guide label (seen below) will not be an acceptable method to verify the efficiency ratings of a unit.** The yellow energy guide efficiencies are only relevant if the outdoor unit has been properly matched to the indoor coil.

Not Accepted

VS.

AHRI Requirement

*ENERGY STAR rebates cannot be combined with Shelby Energy Cooperative's Heat Pump Retrofit Rebate for moving from a resistance heat source to a heat pump.

*Geothermal and Mini-Split systems that meet ENERGY STAR standards will qualify for the rebate. Mini-Split ductless unit rebates will be paid based on the number of outdoor units subject to the program maximum.
